ABSTRACT

This document defines clinical supervision as an intensive, interpersonally-focused, one-to-one relationship in which one person is designated to facilitate the development of therapeutic competence in the other person. Ways in which supervision is similar to, and different from, therapy are explained. The following stages in the clinical supervision process are outlined: (1) establishing a working relationship; (2) assessing the supervisee's skills; (3) establishing learning goals and a contract for supervision; and (4) selecting interventions and evaluating progress. Ideas are presented to help the supervisor work through each of the four stages. The section on stage 2, assessing the supervisee's skills offers ideas for assessing performance counseling skills, cognitive counseling skills, and the supervisee's developmental level. The section on stage 4, selecting interventions and evaluating progress presents ideas for a number of supervision interventions, including self-reports, self-reports compared to actual sessions, audiotapes and videotapes, microtraining, interpersonal process recall, modeling, role playing, live observation, and live supervision. Evaluation methods described include the portfolio method, the individualized learning program, microcounseling procedures, self-supervision, and supervisor monitoring. Relevant materials for supervision are appended. (NB)

CLINICAL SUPERVISION

DEFINITION:

An intensive, interpersonally focused, one-to-one relationship in which one person is designated to facilitate the development of therapeutic competence in the other person.

SUPERVISION PARALLELS THERAPY in that it follows the same sequential stages:

- 1. Establish a working relationship
- 2. Assess (supervisee's) skills
- 3. Agree to a contract for the conduct of (supervisory) sessions and establish learning goals (for supervisee)
- 4. Select interventions and evaluate progress towards goals

BUT FOUR (4) IMPORTANT DISTINCTIONS BETWEEN SUPERVISION AND THERAPY

- 1. Ist priority (of supervisor) must be to insure the <u>welfare</u> of the <u>client</u> (even if not most facilitative interventions for development of supervisee)
- 2. supervisor/supervisee relationship is <u>authoritative</u> in <u>nature</u> in that supervisor held accountable to <u>evaluate</u> the performance if the supervisee
- 3. purpose of self-exploration in supervision rost clways be
 related directly to enhancing treatment of client rather than
 (us in therapy) clearing up barriers within supervisee's
 rersonal functioning that are unrelated to work with lieft;
 which leads to
- 4. supervision is <u>not</u> equal to <u>personal therapy</u> (must refer when find student has personal issues needs to work m)

THE CLINICAL SUPERVISION PROCESS: ISSUES, STAGES AND INTERVENTIONS

Stage 1: ESTABLISHING A WORKING RELATIONSHIP (preferably before supervisee sees clients; important to demonstrate respect for supervisee)

Ideas:

- ask student to describe:
 - a. previous experiences in supervision
 - b. preferred counseling approaches
 - c. preferred supervision approaches
- describe your supervision style

- 3. <u>clarify expectations about supervision</u> (written or verbal contract) might include:
 - a. how frequently you will meet, how long and where?
 - b. how will you use audiotapes, videotapes, casenotes, etc. in supervision?

for example

- -review one tape together, take 2 to review yourself between sessions
- -will tapes reviewed "in session" be on same or different clients?
- -how should supervisee prepare a tape for "in-service supervision preselect segments, complete a standard evaluation form?
- 4. What structure or procedure will you follow each supervision session? Will you begin with:
 - a. a brief review of each client?
 - b. an audiotage? cr
 - c. the supervisce's specific requests/questions?
- 5. how will you handle emergencies (i.e. suicidal clients)?
 - a. how can supervisee reach you?
 - b. what does supervisee do if you are unavailable?
- 6. how will supervisee be evaluated?
 - a. what criteria will be used?
 - b. will you be responsible for assigning a grade? (what percentage of full course grade will this be?)
 - c. will you write a narrative of strengths and areas for improvement?
 - d. will you complete a standard evaluation form provided by college program? (for example, weekly CPS individual Supervision Session Log and cumulative CPS standard evaluation form)
 - e. will there be a midterm (formal or informal) evaluation?

- 7. with what type of clients will supervisee work?
 - a. who does screening?
 - b. can supervisee express preferences?
 - c. what if there is an insufficient number of clients to provide supervisee with enough experience to fulfill practicum or internship requirements; what alternative arrangements will be made?
- 8. If you are college-based (small group) supervisor, when will you be visiting the supervisee's field sit:
 - a. how will visit be set up and confirmed?
 - b. what will you do on these visits?
 - c. how will the supervisee reed to prepare for your visit?
 - d. how should last minute cancelations be handled?

STAGE 2: ASSESS (SUPERVISEE'S) SKILLS

- initial assessment will likely span several supervisory sessions
- should include both your evaluation and supervisee's self-evaluation
- will serve as a basis for a joint statement of Learning Goals for Supervision
- 3 general areas of assessment
 - a. Performance Counseling Skills
 - b. Cognitive Counseling Skills
 - . Developmental Level

1st Assessment Area: Performance Counseling Skills

refers to what counselor <u>does</u> during a session - his/her behaviors and procedural skills including <u>basic helping</u> or <u>facilitative</u> skills (i.e. warmth, genuineness, concreteness, self-disclosure, opening and closing a session) <u>theoretically based techniques</u> (i.e. 2 chair exercise, systematic desensitization), and <u>issue specific techniques</u> (i.e. assessing lethargy of suicidal clients)

Ideas: Ways to Assess Performance Counseling Skills

- 1. ask supervisee to tape an initial session to review together during your next meeting or for you to review beforehand
- 2. meet with supervisee just prior to and following first (lst) counseling session, then observe or even sit in on lst session
- 3. roleplay counseling session with supervisee
- 4. rating scales of lossic skills conse for baseline assessment, ongoing evaluation and final evaluation to measure growth

2nd Assessment Area: Cognitive Counseling Skills

refers to how commelor thinks about the client and chooses interventions—conceptualization skills (i.e. how to sort through and integrate of ant integration and how to form effective clinical hypotheses)

Ideas: Wayn to Assess Cognitive Counseling Skills

to entends of initial califolds whome indication (notice if they to enable a think of it they include observations of own tables a maintainment of all interactions)

which is the constant consisting session with supervises and of tempher to $m = m + \epsilon$ (or processing of specific interventions $m = r + \epsilon$) of crites of questions

- what was I hearing my client say and/or seeing my client do?
- b. What were my alternatives to say or do at this point?
- c. how did I intend to proceed with my selected response(s)?
- 3. use adaptation of Interpersonal Process Recall (IPR) where supervisor reviews videotape of counseling session with supervisee, asking latter to describe underlying thoughts, feelings and intentions during session
 - a. supervisor functions as an "inquirer," facilitates recall of thoughts and feelings and discourages critical self-evaluation.
 - b. by using IPR with early session may glean clues regarding what client data supervisee does and does not attend to and how data is employed in making decisions about interventions

4. supervisee could complete a case conceptualization for an initial client

3rd Assessment Area: Developmental Level

refers to premise that regardless of counselor theoretical orientation, counselor/supervises poss through a series of sequential hierarchial growth stages

Ideas: Way(s) to Assess Developmental Level

There are several different models for assessing the developmental level of supervisees; to I am poing to focus on, and provide you with, a 1982 Counseling Psychologist monograph by Loganbill, Hardy and Delworth permitting to a model that is currently receiving extensive attention in (our) clinical expension literature (see Form A and Appendix)

This Supervision Model:

- hypothesizes 3 stayes of supervisee development (See Appendix Form A), but
- 2. recognizes supervisce's development is a conseler is more intricate and complex than a simple 3 stage model suggests, so
-). It (i. act) aces in to identify 8 key a pervision issues (see Appendix Form B), and
- 4. suggests a supervisee will to in one (of 3) stage(s) of functioning for each of these 8 issues (see Appendix Form B)

In effect, this developmental model draws together performance, cognitive and developmental level data so that clinical supervisor is now ready to move on to Stage 3: Establish Learning Goals and Contract (for Supervision)

STAGE 3: ESTABLISH LEARNING GOALS AND CONTRACT (for Supervision)

Reminder: Learning goals should be specific, observable and broken down into realistic, measureable action steps

Idea(s): Prioritization and Selection of Learning Goals

- 1. Start with 8 Developmental Issues, add others as need.
- 2. Determine Stage 2 (Confusion) Issues, since tend to be most obvious
- 3. Determine Stage 1 (Stagnation) Issues those that are relatively dormant; supervisee's "blind spots"

Note: supervisors - watch not drawn into same "blind spots"

- 4. Survey remaining Issues should be those in which supervisee is in Stage 3 (Integration), then monitor and reinforce to enhance growth
- 5. Decide which Stage 1 (Stagnation) Issues need to move into Stage 2 (Confusion)

Note: since emotionally draining and intense - gauge number (of issues) can work on at one time and which most important to work on first.

- 6. Pecide which Stage 2 (Confusion) Issues need to move forward to Stage 3 (Integration) and which (issues) supervisee could benefit more from by continuing to experience conflict of Stage 2
 - a. guard against premature capping

Once Learning Goals and contract determined, then move to <u>Stage 4</u>: <u>Select Interventions and Evaluate Progress (toward g als)</u>

STAGE 4: Select Interventions and Evaluate Progress (toward goals)

Reminder: select interventions that complement supervisee's preferred approach to learning and feedback styles to enhance involvement and development - i.e. some supervisee's respond best to warmth, praise and support; while others prefer a more objective critique of performance.

Ideas: Supervision Interventions

1. <u>self-reports</u> - supervisee reports verbally on own behavior, thoughts and feelings during a session and then on clients' responses

-can tend to be unreliable because of supervisee's blind spots. but can be improved upon by #2 below

- 2. <u>self-reports compared to actual session</u> via audio or videotapes, live observations, live supervision
- 3. audio and videotapes
 - a. preselected portions that illustrate attempts to implement
 specific goals
 - opening, middle and closing portions ** get overview of entire process
 - c. <u>dual channel approach</u> neurrently record counseling session on one channel and supervisor comments on another or record comments on videotape (dubbing) or on separate tape that can be replayed concurrently
- 4. microtraining identifiable skills isolated and taught one at a time

 (good with person who has a specific skill deficit)

 -each skill presented step by step combining several teaching methods (lecture, manuals describing skill, observation of videotapes, peer and supervisor feedback)
- 5. Interpersonal Process Recall (IPR) developed to stimulate recollections of "houghts and feelings during a counseling session 3 versions
 - a. supervisor debriefs client by encouraging him/her to stop the videotape and discuss unexpressed feelings, thoughts and percentions then the supervisee reviews an audiotape of this "recill" dession before meeting with the supervisor
 - b. <u>supervisor</u> conducts "recall" session <u>with counselor</u> (supervisee) alone
 - c. <u>supervisor</u> conducts "recall" session with client and <u>counselor</u> (supervisee) together

In each version, supervisor's role is facilitative, not judgmental, yet confrontative by asking questions such as:

- a. was there anything you wanted to say, but couldn't find the "appropriate words" or
- b. how did you want the other person to perceive you?
- 6. modeling types
 - a. live audio and videotape models, followed by guided rehearsal of skill and reinforcement by supervisor
 - b. supervisor models skill, procedure or processing

roleplaying - types

- a. supervisee assumes client role, supervisor models intervention
- b. supervisor assumes client role, supervisee rehearses new skill or intervention
- c. supervisee as counselor practices responding to different simulated alient types (i.e. resistent, sucidal)
- d. <u>puzzling portions of counseling session</u> · leplayed and try alternative responses
- e. role reversals
- 8. live observation using one way/two way mirrors.
 - supervisor observes session as it occurs and gives <u>supervisee</u>
 feedback immediately afterwards
 - b. supervisor and group of supervisees observe session and supervisor processes ongoing session with supervisees
- 9. live supervision differs from live observation in assumption supervision will intervene to redirect counseling session; some supervisors interrupt only as needed, others prefer supervisee to leave room at approximately same time each session (i.e. after 20 minutes) to discuss session with supervisor. 3 methods of intervening
 - a. bug in the ear
 - b. telephone/intercom
 - c. simple knock on door/window

Interriptions should be brief and concise - take form of "directives" that are behaviorally concise (i.e "pursue the wife relationship")

IDEAS: WAYS TO EVALUATE

- 1. Portfolio method folder that demonstrates competencies, including
 - a. self-assessments
 - h. audiotapes of counseling session with self and supervisor feedback
 - c. case studies
 - d. session notes demonstrating case conceptualization
 - e. written reports of clients

- 2. "individualized learning program" file that includes goals statements, action plans and evaluations generated over the semester
- 3. microcounseling procedures ex. typescript of a session scored using micro-counseling taxonomy count number of times a specific type of response was used
- 4. <u>self-supervision</u> series of sequential steps and questions supervisee asks self as recycles through procedure
 - a. self-observation
 - 1. what was I hearing my client say and/or seeing my client do?
 - 2. what was I thinking about my observations?
 - 3. what were my alternatives to say or to do at this point?
 - 4. how do I choose from among the alternatives?
 - 5. how did I intend to proceed with my selected responses?
 - 6. what did I actually say or do?
 - b. self-assessment
 - 1. what effects did my response have on my client?
 - 2. how then would I evaluate the effectiveness of my response?
- 5. supervisor monitoring vi:
 - a. case notes summarizing
 - b. issues supervisee presented
 - c. results of supervisee's attempts to put goals into action
 - d. evaluation of tapes or live observations of supervisee's interventions and progress with client
 - e. Supervisee's plan for next session(s)

APPENDIX

FORM A

STAGE ONE: STAGNATION

Descriptive Characteristics

- Two major characteristics, stagnation and unawareness.
- 2. For beginning supervisee, stage characterized by a naive unawareness of any difficulty or deficiency.
- For more experienced supervisee, stage characterized as "stuckness" or stagnation.
- 4. Supervisee experiencing a blind spot.
- 5. Along with unawareness comes naive sense of security.
- 6. Stage also characterized by simplistic black and white thinking.

Attitude Toward The World

- Very narrow and rigid thought patterns.
- 2. Supervisee tends to think in terms of a problem-solution format that allows no room for creativity.
- Only one narrow way to define the problem and only one possible format for the solution.

Attitude Toward The Self

- 1. Attitude toward self may take on one of 2 characteristics.
 - a. First, low self-concept; very strong dependency on supervisor; devalues own innate capacities and relies unduly on supervisor.
 - b. Secondly, may think functioning perfectly well due to lack of awareness.
- Supervisee may characterize his/her own actions as mechanical in nature.

Attitude Toward The Supervisor

- May take on two different tones in this stage.
 - May exhibit extreme dependence-in this case supervisor is idealized and viewed as all-knowing, omnipotent figure.
 - b. A second pattern for supervisee, although supervisor may be viewed as omnipotent in general, may also be viewed as unnecessary, or somewhat irrelevant to issue student dealing with.

Value/Implications

- period of latency or rest; supervisee isn't experiencing any emotional drain or conflict so can direct emotional energy elsewhere
- relative stability of Stage One along some issues can provide security when supervises engaged in State Two turbulance in other issues
- 3. at beginning of supervision process be careful not to rely too much on supervisee input with regard to joint goal setting because student may still be unawart of and unable to grasp/understand all areas in which development is needed
- 4. Since student is dependent on, and looks to, supervisor for "the answer" or treats supervisor with neutral indifference, not defensiveness or hostility, you have receptive climate to encourage experimentation and raise awareness.

STAGE TWO: CONFUSION

Descriptive Characteristics

- instability, disorgarization, erratic fluctuations, disruption, confusion and conflict
- supervisee experiences desperate seeking of equilibrium; ambivalence

Attitude Toward The World

- no longer views world in simple black/white problem-solution orientation
- 2. supervisee may be troubled, solution package no where in sight
- 3. in contrast to stage one naiveness-supervisee knows something is wrong

Attitude Toward The Self

- 1. reflects general confusion, ambivalence
- 2. likely to fluctuate between feelings of failure and imcompetence to feelings of great expertise and ability

Attitude Toward The Supervisor

- 1. becomes apparent to supervisee that golden answer not going to come from supervisor after all, so
- 2. anger and disappointment quickly replace dependency
- 3. supervisor alternately thought to be
 - a. magical, all-knowing person who's simply withholding knowledge, or
 - b. incompetent or inadequate person who has failed to come through

Value/Implications

- for all the disorganization at this state there still are some positive aspects—i.e. old ways of behaving and thinking have been shattered and this creates an opportunity to replace same with fresh, new perspective
- View state in terms of sign of growth not impending failure.
 Since old patterns are out of the way there's now room for new learning to occur.
- 3. Don't join in on surface panic and flurry on nonproductive behaviors; back off and encourage peer input.

STAGE THREE: INTEGRATION

Descriptive Characteristics

- 1. often very welcomed transition to Stage 3, calm after storm
- reorganization, integration, new cognitive understanding, flexibility

Attitude Toward The World

- 1. supervisee begins to realize problems and conflicts can be coped with, perhaps from a new and more creative angle
- 2. supervisee able to look ahead, sense of direction
- 3. acceptance of bad as well as good parts

Attitude Toward The Self

- 1. solid, realistic view of self and competencies possessed
- 2. awareness of strengths and weaknesses
- 3. neither frightened by, nor feels guilty for, weaker areas

Attitude Toward The Supervisor

- 1. clear, reasonable view of supervisor
- seen as neither magical omnipotent person, nor irrelevant and incompetent
- 3. seen as whole person with stronger and weaker areas
- expectations re: what possible to obtain from supervision more realistic

Value/Implications

- 1. Stage is stable, but stability is much less rigid than stability of Stage One.
- 2. There is a lot of flexibility and allowance for continued growth so experiences are being accurately symbolized and continually and freshly valued.
- 3. Supervisee knows self, not frightened nor guilty about underveloped areas and has sense of confidence can/will develop these.
- Supervise able to take active responsibility for content and process of supervisory sessions and willing to use environment, supervisors and ongoing introspection and feedback to achieve growth.
